

CLAIMS

1. A laminated article, comprising a layer (I) containing a saponified product of an ethylene-vinyl acetate copolymer (A) and a polyamide resin (B) and a layer (II) of a polyamide resin (C) which is adjacent to the layer (I) directly or via an adhesive resin layer, wherein the saponified product of an ethylene-vinyl acetate copolymer (A) contains a sodium salt (M1) and a bivalent metal salt (M2), and an amount ratio (M1/M2) of the sodium salt (M1) to the bivalent metal salt (M2) is 0.01 to 15 calculated in terms of metal weight, further comprising 3 to 50 ppm of a phosphorus compound calculated in terms of phosphorus and 10 to 1000 ppm of a hindered phenol antioxidant.

15 2. The laminated article of Claim 1, wherein the amount ratio (M1/M2) of the sodium salt (M1) to the bivalent metal salt (M2) is 0.02 to 5 calculated in terms of metal weight.

20 3. The laminated article of Claim 1 or 2, wherein the polyamide resin (B) is an end-capped polyamide resin.

4. The laminated article of Claim 1, 2 or 3, wherein the saponified product of an ethylene-vinyl acetate copolymer (A) further comprises a boron compound.

25

5. The laminated article of Claim 1, 2, 3 or 4, wherein the outermost layer is the layer of the polyamide resin.

6. The laminated article of Claim 1, 2, 3, 4 or 5, wherein  
the innermost layer is the layer of a polyolefin resin.
